

Indications

Fisiocrem SOLUGEL is the ideal natural solution for soft tissue trauma such as bumps, bruises and common muscular aches and pains that result from sport injuries or everyday life.

It is suitable for use before and after the application of therapeutic Ice or Heat and can be applied prior to support bandaging.

How to use

Take a liberal amount (approx 1/2 - 1 tspn) and rub gently into the affected area. The more you apply or the longer you rub the greater will be the effect. Use as often as required, normally 3 - 4 times per day.

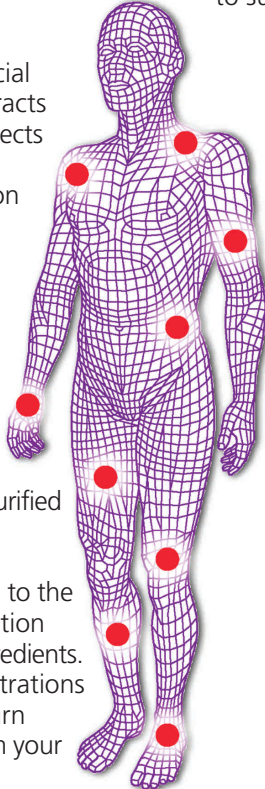

Fisiocrem SOLUGEL is suitable for use during pregnancy and breast feeding and can be used with children. Ensure that children cannot rub the residue into their eyes which will cause temporary discomfort.

Natural solution for muscle and joint aches and pains, bumps and bruises, and to assist the management of low back pain, whiplash and sciatica.

Fisiocrem SOLUGEL contains a special combination of natural plant extracts well known for their beneficial effects in providing relief from the symptomatic pain and aggravation associated with common muscle, joint, and soft tissue trauma.

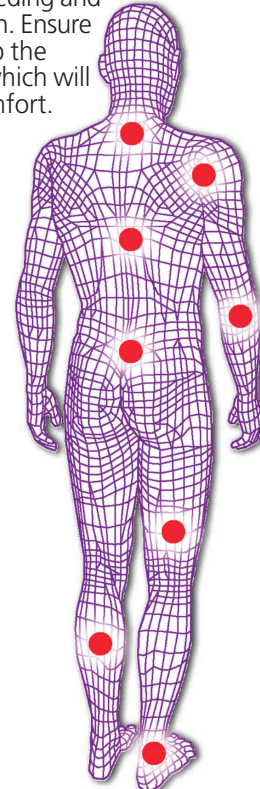

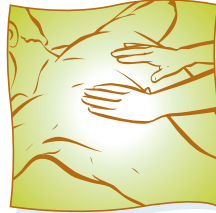

Combining the wisdom of the earliest natural healers with the technology of modern science, the extracts are gently removed from the flowering plants and formed into micro sized particles before being bound into a solution with purified water.

When *Fisiocrem SOLUGEL* is applied to the skin with gentle rubbing the solution rapidly releases the active plant ingredients. This rapid release of high concentrations of natural active ingredients in turn provides you with faster relief from your painful symptoms.

- Always read the label and use only as directed. If symptoms persist consult your Healthcare Professional.

Ingredients

Fisiocrem SOLUGEL contains high levels of active plant extracts. These extracts are not homeopathic dilutions. They are concentrated pure herb extracts derived from plants that are grown and harvested to specific requirements especially for **Fisiocrem** SOLUGEL.

 **Arnica montana** - probably one of the best known herbs worldwide for its use in natural medicine. Arnica has become famous for its role in Homeopathic medicine where the dilution of the plant is used as a first oral treatment for shock, trauma and body injury. Arnica pure herb extracts, when applied topically are extremely useful in treating soft tissue injuries and especially for assisting recovery from bruising.

 **Hypericum perforatum** - commonly known as "St John's Wort". The oily extracts are bright red in colour from the active components, hypericin and hyperforin. St John's Wort has a long history for its use in soothing the damaged and irritated nerves commonly found in whiplash, low back pain, sciatica, strains and sprains.

 **Calendula officinalis** - plays an important role as a topical anti-inflammatory, assisting the dispersion of swelling, and providing a calming relief for angry localised tissues.

 **Melaleuca alternifolia** - Australian Tea Tree oil. Well known in Australian folklore, this plant has recently become the subject of science for its use in topical pain relief, anti-inflammatory, and assistance in microbial preservation of pharmaceutical products.
